

Using the Data Sheets

These data sheets have been designed as a quick reference for a variety of circumstances (for instance, when considering implementation of a new protocol or as a refresher for an infrequently performed procedure). The sheets offer critical highlights to be considered to help ensure a safe and effective procedure, within the scope of currently available apheresis technology.

It is important to note that as new protocols continue to be rapidly developed, the information in these data sheets may not be all-encompassing, but can serve as a basis on which to build. Among the data sheets there is some overlap and many share the same considerations for different types of collections.

The authors have intentionally designed these data sheets as a point of reference, covering the unique aspects of each procedure as well as covering the necessary basics. For in-depth coverage of an area, recommended reading includes: Szczepiorkowski ZM, Winters J, eds. *Apheresis Principles and Practice, 4th edition, Volume 3: Cellular Therapy Apheresis*. Bethesda, MD: AABB Press, 2025. We hope readers find these data sheets useful.

Kyle Annen, DO, Associate Professor, Department of Pathology, University of Colorado-Anschutz School of Medicine, Aurora, Colorado; Bryce Pasko, MD, Assistant Professor, Department of Pathology, University of Arizona School of Medicine, Phoenix, Arizona; Joseph Schwartz, MD, MPH, Senior Medical Officer, Foundation for the Accreditation of Cellular Therapy. Omaha, Nebraska; Zbigniew M. Szczepiorkowski, MD, PhD, FCAP, FRSM, Professor, Department of Pathology and Laboratory Medicine, Dartmouth-Hitchcock Medical Center, Lebanon, New Hampshire; and Suzanne R. Thibodeaux, MD, PhD, Associate Professor, Department of Pathology and Immunology, Washington University School of Medicine, St. Louis, Missouri
